WHOLESALE TRADE LIST

IMPORTANT TO THE TRADE

OUR BUSINESS—The Sherwood Nursery Co. are propagators and growers of ornamental trees and shrubs, specializing in the production of conifers and broadleaved evergreens. We have put into this business the skill and experience of expert nurserymen.

SOIL AND CLIMATE—This skill and experience, coupled with a soil and climate that cannot be excelled for the growing of plants, has resulted in a product that is sure to please. Our soil is just right, free from peat, producing a fine vigorous root system, making a plant that is easy to move. The soil and climatic conditions combine in the larger plants to produce a wealth and luxuriance of foliage that cannot be surpassed in the United States. Most seasons plants can be dug and shipped from our nursery every month of the year except July and August.

QUALITY OF STOCK—The Sherwood Nursery Co. stands back of all stock sold. A constantly increasing list of satisfied customers testifies to the quality of our stock and business methods.

All stock offered in this list is our own production.

LOCATION—Our nurseries are located at Portland, Oregon, at the foot of the Cascade Mountains, with the snowy peaks of Mt. Hood and St. Helens plainly visible from our office windows, and where nature has made conditions favorable for plant production. Favored as we are, we can compete in price and quality with plants grown anywhere. Portland is one of the leading truck and railroad centers of the Pacific coast, reached by main lines north, east, south, and west, with water grade transportation up the Columbia river eastward. Car lots can be shipped to the Atlantic coast in 10 days so that there is no danger of loss of plants.

Visitors are always welcome. If at all possible come and see our stock. It speaks for itself.

We contract to propagate in our lines. If interested write for prices and particulars, indicating your needs.

TERMS AND INFORMATION

TERMS:

Cash with order. Prices F. O. B. Portland.

To guarantee the reservation of stock for future fall or spring delivery, one-fourth of the purchase price should accompany the order. Orders will be filled in the order in which they are received.

C. O. D. orders must be accompanied by one-fourth cash before shipment can be made.

WRITE FOR SPECIAL PRICES AND TERMS ON CAR LOTS.

PACKING:

Boxing and packing will be charged for at cost. No charge for packing car lots.

RESPONSIBILITY:

All the stock offered by this Company is grown out of doors and in their own fields with the greatest care and packed in like manner and we make no guarantee, either expressed or implied that the plants will grow or give specific results. Upon proper proof, any plants untrue will be replaced, or any miscounted will be corrected. It is mutually agreed that our responsibility is limited to the original price paid. Complaints must be made within 5 days after receipt of plants. All shipments are at the risk of purchaser after being delivered in good condition to the carrier.

SHIPPING DIRECTIONS:

Give explicit directions stating whether stock is to be shipped by rail or auto freight, parcel post or express. In the absence of advice we use our best judgment.

NOTE:

We accept all orders upon condition that they shall be void should frost, storm or other unavoidable cause result in injury or destruction of stock.

SHERWOOD NURSERY COMPANY
141 S. E. 65th Ave., Portland, Oregon

TO REACH NURSERY:

Drive east on East Stark Street highway to Southeast 72nd Avenue.

OR, drive east on East Burnside to Southeast 73rd Avenue.

Nursery is reached in a fifteen minute drive from the center of city by either one of these two main highways leading eastward.

CONIFERS

BALLED AND LINING OUT SIZES.

Note: No order for lining out stock will be filled for less than 10 of a kind, and where less than 25 of a kind are ordered the prices will be 25 per cent more than the 100 rate.

Abies concolor (White Fir)

A tree of symmetrical growth, even color, and resistant to heat, cold and drouth.

		Each	10	100	1000

4- 5 "	"	"	"
5- 6 "	"	"	"

Chamaecyparis lawsoniana lutea (Golden Lawson Cypress)

Dense golden cypress. The foliage is very heavy, while the tree itself is a broad symmetrical pyramid, branching close to the ground. A trim, handsome ornamental, giving the impression of an individual well dressed and groomed, and with a minimum amount of attention. Golden color throughout the year. Resembles Westermann Cypress. Height 6 to 8 feet.

Rooted Cuttings	6	45
-----------------------	-------	-------	---	----

Chamaecyparis lawsoniana minima glauca

A true dwarf, dark and dense, bluish green foliage, erect and slow growing. One of the finest of small, low dwarfs. Height 1½ feet, diameter 2 ft. full grown. A novelty.

Rooted cuttings.....	7
----------------------	-------	-------	---	-------

Chamaecyparis lawsoniana nestoides (Bird's Nest Cypress)

A beautiful, low-growing dwarf, of very regular but spreading habit of growth, attaining a spread of 6 feet with a height of 2 feet. The name is misleading as it more nearly resembles a mushroom in form of growth. Has lovely, bright green foliage. Excels for specimen planting.

	Each	10	100	1000
Rooted Cuttings	\$.....	\$.....	\$ 6	\$ 45

Chamaecyparis lawsoniana stewarti (Wintergolden Cypress)

Rather slender golden tree. Foliage erect with pendulous tips toward the top of the tree. One of the most remarkable and most admired of conifers, always attracting attention. Stately in habit, with green and golden foliage of most effective contrast. Rare.

Rooted Cuttings	6	45
4- 6 inches Once Transplanted.....	7
6- 8 " " " "	9
8-10 " " " "	11
10-12 " " " "	13

Chamaecyparis lawsoniana westermanni (Westerman Cypress)

Foliage pendulous and heavy, velvety golden color the year around. One of the most graceful and aristocratic of the Lawsons. It is rapid growing, wide spreading and fits to the ground in a most charming manner. Enjoys the sun. Rare.

Rooted Cuttings	6
10-12 inches Twice Transplanted.....	B&B	.30 2.75	23
12-15 " " " "	B&B	.40 3.50	30
15-18 " " " "	B&B	.50 4.50	38

Chamaecyparis lawsoniana wisseli (Wissel Cypress)

Has a dark bluish green foliage, growing in twisted tufts or whorls and of upright growth. One of the many beautiful forms of the Lawson Cypress.

8-10 inches 1 year graft.....	B&B 2.25	19
10-12 " " " "	B&B 2.75	23
12-15 " " " "	B&B 3.25	26

Chamaecyparis lawsoniana Triomphe de Boskoop

In color this magnificent tree occupies much the same place in the cypress group that the Koster Blue Spruce does in the spruces. Of graceful form and the foliage has a strikingly silvery-blue sheen that makes it outstanding among trees. A rapid grower and perfectly hardy in this climate.

Rooted Cuttings	7	53
-----------------------	-------	-------	---	----

Chamaecyparis obtusa (Hinoki Cypress)

Of heavy rich deep green, and compact foliage, lustrous and exceptionally pleasing, having no superior in these respects. It is graceful in growth and semi-dwarf. Many consider the Obtusa as having the finest green foliage among conifers.

Rooted Cuttings	7	53
8-10 inches Twice Transplanted.....	B&B	.30 2.75
12-15 inches Three Times Transplanted.....	B&B	.50 4.50	38

3- 4 feet		Four Times Transplanted.....	B&B	1.50	13.50

Chamaecyparis obtusa crippi

A very conspicuous and golden type of Hinoki Cypress, attaining a height of six to eight feet. Has fern-like foliage, grows slowly and flourishes best in partial shade.

Routed Cuttings	7	53
-----------------------	-------	-------	---	----

Chamaecyparis obtusa ericoides (Sander Retinospora)

Bright green in summer, changing to intense steel blue in winter. Hardy, dwarf and compact. An unusual conifer.

2- 4 inches	Twice Transplanted.....	6
4- 6 "	" " " ".....	8
6- 8 "	" " " ".....	10
8-10 "	" " " ".....	B&B	.30	2.75
10-12 "	" " " ".....	B&B	.40	3.50

Chamaecyparis obtusa nana (Dwarf Hinoki Cypress)

A real dwarf, having dense, compact, dark green foliage of the richness of the larger Hinoki, and unchanging in color throughout the year. Of almost perfect symmetry. The choicest of dwarf Obtusas, attaining a height of about 18 inches.

Routed Cuttings	8
-----------------------	-------	-------	---	-------

Chamaecyparis obtusa tetragona aurea

An extremely handsome dwarf golden form of Hinoki Cypress. The foliage is of exceeding density and intense gold. Very rare.

Cryptomeria japonica elegans (Plume Cryptomeria)

A rapid growing tree with dense plume-like foliage turning bronze in winter.

12-15 inches	Twice Transplanted.....	B&B	.25	2.25
--------------	-------------------------	-----	-----	------	-------	-------

Cryptomeria japonica elegans compacta (Compact Plume Cryptomeria)

Same as preceeding, but more dwarf, foliage heavier and more compact.

Holds greener color during the winter season than Elegans. New.

		Each	10	100	1000
6- 8 inches	Twice Transplanted.....	\$	\$	\$ 8	\$
8-10 "	" " "	10
10-12 "	" " "	12

Cryptomeria japonica lobbi (Lobb Cryptomeria)

Dwarf, growing three to four feet high. Symmetrical pyramid of uniform color throughout the year. Rare.

Rooted Cuttings	7	53
-----------------------	-------	-------	---	----

Cryptomeria japonica nana (Dwarf Cryptomeria)

Light green, hardy, very compact globe, extremely dwarf, being full grown at eighteen inches in height. Rare.

Rooted Cuttings	8
-----------------------	-------	-------	---	-------

Cupressus sempervirens fastigiata (Columnar Italian Cypress)

One of the most slender of columnar trees. One admired by many, and desirable where columnar effects are sought.

3- 4 feet	Three Times Transplanted.....	B&B	.35	3.25	26
4- 5 "	" " " "	B&B	.45	4.00	34
5- 6 "	" " " "	B&B	.55	5.00	41

9-10 "	" " " "	B&B	1.35	12.25	101
10-12 "	" " " "	B&B	1.50	13.50	113

Cypress—See *Chamaecyparis* or *Cupressus*Fir—See *Abies***Juniperus** (Cream Tipped Juniper)

This juniper adds variation and beauty both in form and color from the average juniper. Foliage in spring and summer bright green with cream tips, winter foliage is a rich bronze with tips of old gold. Low spreading, vase-like form, reaching a height of 3 feet with a spread of 6 feet. Were it not of low spreading form, it might be regarded as Goldtip Redcedar. Name unknown and plant is a very rare type.

Rooted Cuttings	5	38
-----------------------	-------	-------	---	----

Juniperus (Blue Creeping)

Have been unable to identify this rare plant. Its color is the matchless blue of the Blue Atlas Cedar, and unchanging from season to season. The foliage is almost cypress-like in texture, somewhat resembling the Waukegan Juniper. Very hardy and does not exceed six inches in height. It undoubtedly has a great future, combining as it does delightful qualities of color, foliage, and habit of growth.

Rooted Cuttings	8
-----------------------	-------	-------	---	-------

Juniperus chinensis (Chinese Juniper)

Has heavy foliage, resembling the Spiny Greek. Hardy, withstanding almost any degree of heat or cold.

10-12 inches	Twice Transplanted.....	B&B	.25	2.25	19
12-15 "	" " "	B&B	.35	3.25

Juniperus chinensis femina (Sylvestris) (Reeves Juniper)

A loosely branched tree, tips slightly nodding. Foliage bright green, completely covering the branches, in fact it is so dense that the branches appear to be moss laden. Contrast between adult and juvenile foliage is very delightful. A wonderful tree.

Rooted Cuttings	7
-----------------------	-------	-------	---	-------

Juniperus chinensis pfitzeriana (Pfitzers Juniper)

This well known juniper can scarcely be excelled for terrace and mass planting. Upright training gives it a very individual habit of growth and greater range of landscape uses. It is hardy and a rapid, vigorous grower and thrives under adverse conditions of soil and climate.

Thuja occidentalis nana (Little Globe Arborvitae)

A dwarf of regular form. Foliage upright and grows in thick, heavy layers appearing to be packed together, and of good bright green color. Low growing, a mature tree reaching a height of two feet and spread of three feet, and presents an aged appearance. Desirable wherever dwarfs are needed.

	Each	10	100	1000
Rooted Cuttings	\$	\$	\$ 5	\$ 38

Thuja occidentalis pyramidalis (American Pyramidal Arborvitae)

A most desirable arborvitae of narrow columnar growth, dense and compact without trimming. Very hardy and a favorite in almost any planting. Planted in groups it produces a most impressive alpine effect. In situations where effective hedges are desired requiring but little space, Pyramidal Arborvitae has no counterpart. The hedge becomes a solid wall of green from four to twenty feet in height and occupies no more than two feet in width. For hedges, trees should be planted one and one-half feet apart. No pruning is needed other than topping.

A Pyramidal Arborvitae hedge requires scarcely any care.

Andromeda—See Pieris**Arctostaphylos columbiana** (Manzanita)

A shrub of rounded type of growth, attaining a height of four to five feet. Unique and picturesque. Has rather small, round, thick leaves of grayish silver tone, and reddish brown bark that scales off in flakes. A hardy, rugged little mountain shrub that is just different. The flowers, which grow in nodding clusters, are white and pink. Native of the Cascades.

Rooted Cuttings	5
-----------------------	-------	-------	---	-------

Aucuba japonica variegata (Golddust Aucuba)

Leaves large, glossy, dark green splashed with gold. Hardy and resistant to smoke and dust. The variegated foliage gives this plant a bright cheerful aspect and since it thrives best in deep shade it is a most useful evergreen, for brightening dark shady corners difficult to landscape. Grows five to six feet tall.

Azalea sherwoodii (Sherwood Orchid Azalea)

This is a hybrid hinodegiri and our own introduction. The flowers are a fascinating and beautiful orchid in color. It has been awarded a prize in a rare plant exhibit, and was first offered for sale last year. We have been developing and trying it out for several years in our nursery where it has attracted much attention from visitors. Foliage

about the size and gloss of the Hinodegiri Crimson Azalea, hardy anywhere the hinodegiri is hardy, a profuse bloomer, blooms completely covering the plant, and are large for a dwarf azalea. Flowers are a clear lavender with a speckled throat. This azalea fills a need which has not been met by any other azalea. Although showy it harmonizes with other colors in the garden.

4- 6	" " ".....	8

Calluna vulgaris rubra (Red Heather)

The Red Heather is new and may still be considered a rare plant. When in bloom there is nothing visible but the blossoms, which are a rich, purplish-red. It is such a brilliant display of flowering beauty in mid-summer that visitors to our nursery from far and near have been amazed at its superb beauty and have been unstinted in their praise. It is hardy and grows about eighteen inches tall. As in the case of the Darley Heath and Irish Bell Heather, we cannot say too much for this matchless gem of the garden. Its blooms are especially welcome, coming at a season when there is but little competition in blossoming shrubs.

Daphne odora (Winter Daphne)

Grows about three feet tall, broad glossy foliage. Flowers are pearly pink, appear in clusters and are of intense fragrance. A justly popular shrub, always in demand.

Rooted Cuttings	6	45
-----------------------	-------	-------	-------	-------	---	----

Erica mediterranea hybrida (Darley Heath) (Also Called Hybrid Heath, Christmas Heather or Winter Heather)

This is one of the most attractive and desirable plants grown in our nursery. It is hardy and dwarf, seldom reaching more than one foot in height. It has a beautiful, dense dark green foliage and from early winter to spring is covered with such a profusion of lovely, purplish blossoms that the foliage is practically obscured. It is not unusual to see this brave little plant blossoming through the snow. Being a winter bloomer, hardy, equally good for rockeries, borders, groups and masses, it should be included in every planting.

Privet—See Ligustrum

Rhododendron ponticum (Pontic Rhododendron)

Hardy, vigorous grower. Large, glossy foliage. Pink to lavender blooms. The rhododendron is one of the most satisfactory of all shrubs. Besides its healthy, glossy foliage at all times, it provides the home with a luxuriance of blossoms that are a delight to all. Fits into practically all plantings, used either singly or in masses. Our lining out grades are fine sturdy little plants and the larger sizes are full of blossom buds. This is one of our specialties which we grow in quantities, and have made the prices correspondingly low.

Wintercreeper—See Euonymus

Xerophyllum tenax (Pine Lily, Bear Grass, Squaw Grass, or Indian Basket Grass)

A native of the Cascade and Rocky mountains. Grows into a graceful symmetrical bunch in weeping form and might be described as a low fountain in grass, about eighteen inches high and two to three feet across. Out of the center of this grassy bunch grow the tall stems three to five feet in height and from one to as many as twenty in number, crowned with the long creamy-white lily heads of matchless beauty. The leaves which are grass-like are evergreen, and unusual as it may seem, it is an evergreen belonging to the lily family. Mountain slopes and meadows, clad in fields of these lilies are a thrilling picture, which once seen will never be forgotten. The grass is said to have been used by the squaws in early days in weaving baskets. Perfectly hardy, rather slow growing but long-lived. Should be planted in groups, and in the open where it is partially shaded during the day for best results. Will not bloom well if too shaded. The fine bunches of long, silky grass are very ornamental when the lily is not in bloom. A plant with a future, and rare in American gardens.
